Role : **Frontend Developer & Product Owner**

Product Owner – ArtyUs

As the **Product Owner**, I ensured that the project features aligned with user needs by defining clear requirements and validating the overall functionality. I coordinated with the team to prioritize tasks, refine workflows, and ensure the final product delivered a smooth and user-centric experience.

Frontend Development – ArtyUs

Frontend Overview

As a Frontend Developer, I focused on creating navigation, user-based dashboards, and the complete ordering flow of ArtyUs.
My work ensured that users get a customized experience based on their login role (Trader, Service Provider, or User) and can smoothly place orders through the application.

Frontend Responsibilities

My major responsibilities included:

- Designing and finalizing the **Navbar UI & flow**

- Building **role-based dashboard logic** for:

- ○ Trader Dashboard

- ○ Service Provider Dashboard

- ○ User Dashboard

- Developing the **Orders Module** (view orders, order details)

- Implementing the **Cart functionality**

- Building the **Payment Page UI and flow**

- Creating the **Profile Page UI**

- Managing protected routes based on user login

- Improving user experience with smooth navigation and state handling

---

Pages & Modules Developed

✔ Navbar (Finalized & Implemented)

Features:

- Dynamic navbar based on logged-in user type

- Display different menu items for Trader, Service Provider, and User

- Logout button & user session handling

- Integrated with Next.js routing

✔ Role-Based Dashboard System

I created logic so that **after login**, users automatically see the correct dashboard.

1. Trader Dashboard

- Manage products

- View orders

- Access account settings

2. Service Provider Dashboard

- Manage services

- Portfolio view

- Client inquiries

3. User Dashboard

- View orders

- Manage cart

- Update profile

✔ Orders Module

I built the entire orders interface:

- Orders list page

- Order details page

- Order status display

✔ Cart Pages

I developed all cart-related UI:

- Add to Cart button

- Cart page layout

- Increase/decrease quantity

- Remove item from cart

- Cart price calculation section

- Checkout button

✔ Payment Page

I designed:

- Payment summary page

- Address + payment method section

- Final order confirmation UI

- Success page after payment

✔ Profile Page

Contains:

- User details

- Edit profile form

- Role-based data display

- Saved addresses / contact info

UI/UX Design Principles Followed

- Role-based personalized user experience

- Clean and easy navigation

- Consistent colors and spacing

- Smooth transitions and intuitive icons

Tools & Technologies Used

- React.js

- Next.js App Router

- Tailwind CSS

- Axios

- GitHub for version control
