Role:Backend & Testing

Responsibilities

- Set up the **backend environment** (Node.js/express.js).

- Installed and configured necessary packages for backend development.

- Created and structured the **MySQL database** for the project.

- Designed and created **all database tables** required for the product module and service provider module along with krutarth.

- Connected backend to the MySQL database.

- Set up initial API project structure.

- Setup **Docker** for containerization

- Done testing the APIs logic in Postman

Work Done

- Created database in MySql

- Created tables such as:

  - `products`

  - `categories`

- `service_providers`

  - `users`

  - `orders`

- Implemented backend folder structure:

  - `/controllers`

  - `/routes`

  - `/models`

  - `/config`

- Ensured database connection using environment variables.

- Performed initial API testing using Postman.
