Role : Backend Developer

Responsibilities

- Worked with Om to **finalize the complete database schema** for the project.

- Helped in reviewing and normalizing the schema (fixing relations, primary keys, foreign keys).

- Helped in planning API endpoints for:

    - Product CRUD
    - Service Provider CRUD
    - User management
    - Category Management

- Assisted in preparing the backend folder structure and route definitions.

- Tested backend API responses in Postman.

Work Done

- Co-designed the schema with Om including:

    - Product fields (name, price, quantity, category, image path)

    - Service provider fields (name, service type, experience, portfolio images, charges)

    - User table fields

- Documented relationships and data flow.

- Helped structure backend routes like:

    - `/api/products`
    - `/api/service-providers`
    - `/api/users`
    - `/api/traders`
    - `/api/categories`
    - `/api/slug`
